deegree

Agenda

- deegree's last year
- deegree today
- deegree's next year

What happened since deegree day 2008?

Presentations

- FOSS4G 2008: Presentations and tutorial
- INTERGEO 2008: OSGeo booth and presentations
- FOSSGIS 2009: Workshop on metadata management

Papers

- GEOconnexion International Magazine July 2008: Open Sources #12 – deegree, an SDI framework
- Greve/Heier/Kiehle Geoprocessing

http://wiki.osgeo.org/wiki/Deegree_Report_2008

Releases

- deegree 3 alpha has been released, containing SOS as a first ready-to-run demo
- deegree 2.2 stable has been released in December
 - new CRS package
 - iGeoPortal: central CSS configuration, PDF print module, free text search in gazetteer module
 - CSW w/ ISO AP 1.0 support
- deegree 2.3 stable still pending as release guidelines are being revised

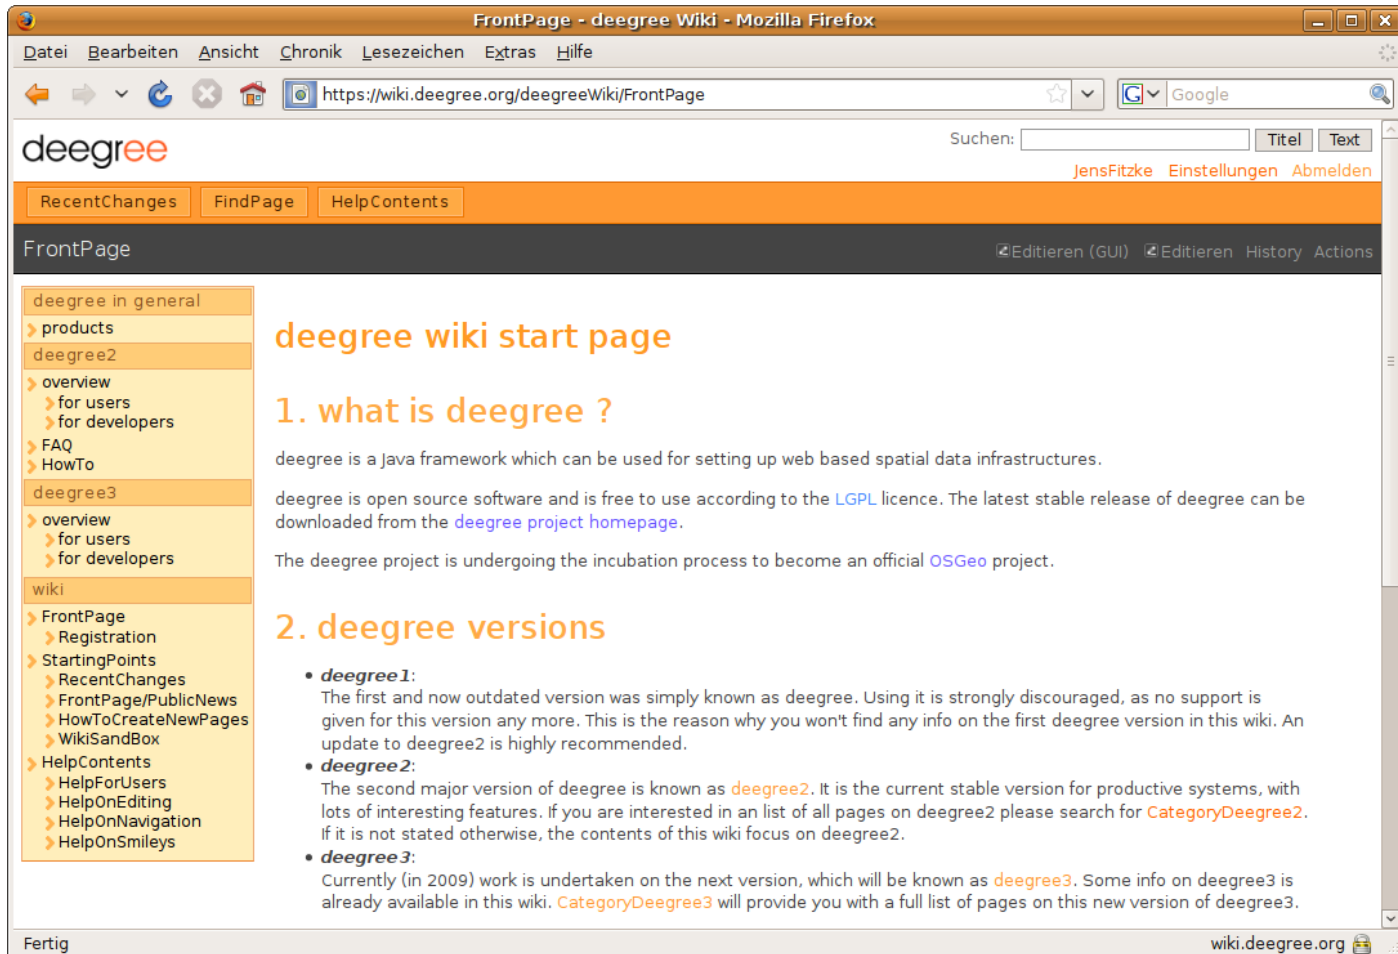

A growing community

- SVN committers: 17
- Users list members: 228
- Developer list members: 153
- New PSC member: Herman Assink

deegree wiki

- New layout and improved indexes

deegree wiki start page

1. what is deegree ?

deegree is a Java framework which can be used for setting up web based spatial data infrastructures.

deegree is open source software and is free to use according to the [LGPL](#) licence. The latest stable release of deegree can be downloaded from the [deegree project homepage](#).

The deegree project is undergoing the incubation process to become an official [OSGeo](#) project.

2. deegree versions

- **deegree1:**
The first and now outdated version was simply known as deegree. Using it is strongly discouraged, as no support is given for this version any more. This is the reason why you won't find any info on the first deegree version in this wiki. An update to deegree2 is highly recommended.
- **deegree2:**
The second major version of deegree is known as [deegree2](#). It is the current stable version for productive systems, with lots of interesting features. If you are interested in an list of all pages on deegree2 please search for [CategoryDeegree2](#). If it is not stated otherwise, the contents of this wiki focus on deegree2.
- **deegree3:**
Currently (in 2009) work is undertaken on the next version, which will be known as [deegree3](#). Some info on deegree3 is already available in this wiki. [CategoryDeegree3](#) will provide you with a full list of pages on this new version of deegree3.

PSC tasks

- Oct 2008: Register deegree 2.3 (upcoming) as an OGC WFS 1.0 and 1.1 compliant product (*open*)
- Nov 2008: Make easy-to-install packages of deegree3 prototype services available
- Nov 2008: Establish project procedure documentation and code provenance review (*open*)
- Nov 2008: Make release management guidelines available in the Wiki (*open, depends on 2.3 release*)
- Apr 2009: Develop deegree 3 documentation in Wiki
- April 2009: Make application-specific artefacts available in deegree SVN

Outlook for 2009/2010

- Publish deegree 2.3 stable
- Develop strategic targets (deegree 2/3, community, documentation, outreach)
- OSGeo incubation:
 - Develop guidelines for project procedures and copyright issues for code submitters
 - Finish code provenance review
 - Graduate to OSGeo project
- Publish deegree 3 milestone, including SOS, WCS, WFS, WMS, WPS, WPVS
- Celebrate deegree's 10th birthday
